

PENT garden shed 10 x 8

CHILWORTH Summer cabin painted.

Workshop 12 x 8

When purchasing a garden building it is essential to know some of the important details that will ensure that the building will fulfil your requirements, give you value for money and will last. Buying from a catalogue or from the internet can be risky especially if the manufacturer does not give you the opportunity to view their products.

To help, we have outlined a number of key points to watch out for when choosing a garden building. Titan buildings meet all these recommendations and you can view and purchase them online and at show sites all over the South of England.

11 Top tips for Buying Your Shed

1. The price quoted should include the floor, the glass, treated wood, delivery and VAT.
2. The building should be tanalised. This provides total panel protection and ensures that the whole panel is treated - not just the parts that can be seen.
3. For a lasting building it should be manufactured using Redwood in all the exposed areas rather than the less durable Whitewood.
4. Shiplap and Loglap finishes should be tongue and grooved or rebated shiplap (see pictures below).

LOGLAP 20 mm thickness

SHIPLAP 12mm thickness

5. Are you being offered the exact size of building that you want for your Site or, do have to compromise? We know that your requirements might not always be straight forward so we offer a service that is tailored to your needs.
6. With Titan you can have the door and windows where you need them at no extra cost. All good buildings will be covered by a comprehensive 12 month guarantee.
7. Are your contents secure in the building? The doors should have positive seating and security bolts just as Titan's do, and the doors should also be ledged and braced for added strength.
8. The fittings and fixings should all be high quality and rust proof such as smelted galvanised or stainless steel.

10. What is the height of the building? Are you comfortable standing and working in the building? Some manufacturers cut costs by reducing the overall height. At Titan not only do we provide generous headroom, but we can increase it to your specification. This is important if you have tall objects to store or are particularly tall yourself.
11. Chipboard, OSB board, particle board and Sterling board should not be used. These materials are really not suitable for outdoor use.
12. One final point, it's worth looking at the manufacturer's background. How long have they been in business? Do they subcontract all or part of their manufacturing and installation? Do they have effective quality control?

Titan Garden Buildings. Built to Last.

Friendly and helpful staff will help you to find the right product to suit your requirements and budget. Most of them have three decades of knowledge to engineer and design the best building for you.

Titan have been making and installing sheds since 1945. That's almost 70 years and two generations of getting it right. We have manufactured and supplied hundreds of thousands of quality garden building since that date.

All our work carries a year's guarantee covering manufacturing defects and installation. Timber is tanalised pressure treated for a 25 year guarantee against rot.

The company motto is "Built to Last". Some buildings we know of are still standing since the 1960s. Our customers include sports associations, councils, schools, golf clubs, cricket clubs and building companies.
